DETAILED ACTION

Allowable Subject Matter

Claims 1, 10-12 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record that predates the filing date of this application does not teach nor suggest, in the claimed combination, a magnetic sensor comprising a giant magnetoresistive effect element having a spin valve film including a pinned layer, a conductive spacer layer, and a free layer comprising: a bias magnet film composed of a permanent magnet for producing a bias magnetic field in the free layer in a predetermined direction so that the direction of magnetization in each magnetic domain in the free layer can be maintained in the predetermined initial state direction', and an initializing coil that is provided in the vicinity of the free layer and applies to the free layer an initializing magnetic field in the direction same as the direction of the bias magnetic field by being energized under a predetermined condition so that the direction of magnetization in each magnetic domain in the free layer can assuredly be returned to initial state direction even if the direction of magnetization is disturbed by applying a strong magnetic field to the free layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
